

Sajad Amouei Sheshkal

AI Engineer | Generative AI | Computer Vision | LLM & RAG

Oslo, Norway | +47 966 55 770 | sajad.amouei@gmail.com | [LinkedIn](#) | [GitHub](#) | [Google Scholar](#)

SUMMARY

AI/ML professional with 4+ years of experience across applied machine learning research, deep learning, computer vision, generative AI, and LLM/RAG-based systems. Skilled in building applied AI solutions using Python, Keras/PyTorch, scikit-learn, RAG, cloud-based deployment, and API-driven integration. Experienced in both research and industry environments, with a strong ability to design, implement, and deploy AI systems that solve practical problems and support real business workflows.

WORK EXPERIENCE

AI Engineer Min Sone AS, Oslo	Aug 2025 – Present
- Building an LLM-powered course-builder platform using Python, TypeScript/Next.js, React, Tailwind CSS, Docker, Nginx, and Azure to generate branching interactive training flows from user prompts. - Identified a cost-efficient alternative to custom video/game-based safety training by combining generative video and interactive e-learning tools for a client in the electrical industry, then transformed the validated workflow into a scalable AI course-builder platform. - Built and deployed a production RAG-based AI chatbot for Norwegian legal/workplace documents using Azure OpenAI, FastAPI, FAISS vector search, and Docker, enabling content-grounded answers with source citations through a secure API and embeddable web widget. [Public Launch]	
Industrial PhD Researcher Simula Metropolitan Center for Digital Engineering, Oslo	Jan 2022 – Apr 2025
- Built a Python/scikit-learn pipeline to classify dry eye disease from high-dimensional tear-film metabolomics data, comparing LR, XGBoost, RF, SVM, MLP, and k-NN with cross-validation and hyperparameter tuning. [Code] [Paper] - Built an ML-Peaks pipeline for ChIP-Seq peak detection using sliding-window feature extraction, LDA-based feature reduction, and scikit-learn classifiers including SVM, XGBoost, and AdaBoost. [Code] [Paper] - Optimized audio feature extraction for real-time talking portrait synthesis by integrating Whisper-Tiny with RAD-NeRF and ER-NeRF, reducing audio feature extraction latency while preserving lip-sync and rendering quality. [Code] [Paper]	
Research Assistant University of Tehran	Feb 2021 – Dec 2021
- Developed a PyTorch-based SinGAN-Seg pipeline for medical image segmentation, generating synthetic polyp images and corresponding masks from single annotated examples to improve training under limited-data conditions. [Code] [Paper] - Developed an end-to-end person re-identification pipeline using Keras, Siamese CNN architecture, EfficientNet transfer learning, pairwise verification loss, and CMC evaluation on the CUHK01 dataset. [Code] [Paper]	

TECHNICAL SKILLS

Programming:	Python, MATLAB, C#, C++, TypeScript
AI & LLM Engineering:	Deep Learning, LLMs, RAG, Generative AI, Computer Vision, Explainable AI, Model Evaluation
Frameworks & Data:	Keras, PyTorch, LangChain, MLflow, SQL, PostgreSQL, scikit-learn, Pandas, NumPy, SciPy
Cloud, Backend & DevOps:	Azure AI Services, Docker, Git, CI/CD, FastAPI, REST APIs, FAISS
Web:	React, Next.js, Tailwind CSS

EDUCATION

Oslo Metropolitan University Industrial PhD Research in Artificial Intelligence for Biological Data	Oslo, Norway Jan 2022 – Apr 2025
University of Tehran MSc in Deep Learning for Person Re-Identification	Tehran, Iran Jan 2016 – Jan 2020
